Conference Dinner

Date: 9th February 2019

Time: 7.00 p.m. onwards

Venue: Riverside Hotel, Badulla.

International Research Conference Dinner will be served on Thursday evening 7th February, 2019. Furthermore, a welcome dance performed by our university students is scheduled to welcome the guests. Adding to that you will witness the grace and glamour of unique Sri Lankan Traditional Dances; Kandian dance, Bharatanatyam and Western dance among other events.

The Kandian, or up-country (udarata natum), dances, are regarded as the classical dance tradition of Sri Lanka. Kandyan dancers are traditionally performed only by male dancers. The technique, partly derived from South India, focuses on dynamism, powerful footwork, leaps and whirls. It has a vast repertoire, partly originating from an ancient indigenous ritual dance, partly influenced by South Indian dances. Kandyan dances are now probably the country's most important cultural export. However, the most spectacular performances can still be seen in a religious context, particularly during the annual Kandy Perahera procession in the city of Kandy.

Bharatanatyam, a pre-eminent Indian classical dance form presumably the oldest classical dance heritage of India is regarded as mother of many other Indian classical dance forms. Conventionally, a solo dance performed only by women, it initiated in the Hindu temples of Tamil Nadu and eventually flourished in South India. Theoretical base of this form traces back to 'Natya Shastra', the ancient Sanskrit Hindu text on the performing arts. A form of illustrative anecdote of Hindu religious themes and spiritual ideas emoted by dancer with excellent footwork and impressive gestures its performance repertoire includes nrita, nritya and natya. Accompanists include a singer, music and particularly the guru who directs and conducts the performance.

Conference Tour

Itinerary:

Mahiyangana Temple, Dambana indigenous village & Ayurvedic Museum and Sorabora Lake

Date: 9th February, 2019.

Starting Time: 5.00 a.m.

Gathering Point: Uva Wellassa University

Mahiyangana Raja Maha Vihara is an ancient Buddhist temple in Mahiyangana, Sri Lanka. It is believed to be the site of Gautama Buddha's first visit to the country, and is one of the Solosmasthanas, the 16 sacred religious locations in Sri Lanka. Currently this temple has been declared as one of archaeological site in Sri Lanka. A Yakka chieftain named Saman (who is now regarded as a deity) attained Sotāpanna (Sovan) after listening to the Buddha's discourse, and asked for a token from the

Buddha that they could worship in his absence. The Buddha had given him a handful of hair from his head, which Saman later enshrined in a small stupa, 10 feet (3.0 m) in height. This was the first stupa to be built in Sri Lanka.

Sri Lanka's Aborigines', or the Veddha's meaning "people of the forest" of Sri Lanka has a history much older than prince Vijaya's landing in 5th century BC and the origins of the Sinhala race. Archaeological evidence suggests that modern Veddha's Neolithic ancestors inhabited this island as far back as 10,000 BC. Once, roaming the Great Plains' of the north central region to the central mountains, today the remaining Veddha population are confined to Dambana which is close to Maduru oya sanctuary. Today, the Veddha's are more modernized as far as at least the cloths are concerned and perfect way to observe Veddha is to organize a camp close to or within a reservation and Veddha's will be more than glad to show you their ways of life, with an

axe hanging from their shoulders and a bow slung behind them, gives you the impression nothing much has changed since the dawn of time for these proud warriors of the forest.

Sorabora Wawa (Sinhalese: සොරබොර වැව) is an ancient reservoir in Mahiyangana, Badulla District in Sri Lanka. It is thought to have been constructed during the reign of King Dutugemunu (161 BC – 137 BC) by a giant named Bulatha. In the ancient past, this tank was known as the 'Sea of Bintenna'. The tank has been built by damming the Diyawanna Oya with a 485-meter embankment. It does not make use of the structure called Bisokotuwa, which helps to regulate water pressure at the sluice gates from inside the tank and protect the embankment from erosion. Instead of that the sluice gate (Sorowwa) of the tank has been

placed strategically away from the embankment and made up utilizing the massive natural rock around the tank. It is say that this is the only such type sluice gate found in Sri Lanka.

Past Symposia

The first research symposium of Uva Wellassa University proudly launched with the theme of “Value Addition to the Natural Resource Base” which was held on September 2010. The 1st Symposium received one hundred and seventy-six (176) research papers scholarly contribution under five themes which were believed to be exploited by the participants to create a platform to debate and discuss valuable scientific ideas to be developed in order to add value to the natural resource base. Further, numerous lab-scale innovations were exhibited at the symposium.

The 2nd symposium which was held on December 15 & 16, 2011 on the theme “Towards a Knowledge Economy” and provided an opportunity for Uva Wellassa University undergraduates, academics, scientists, industrialists and entrepreneurs both local and overseas to deliberate, debate and exhibit their research outputs, innovative findings, novel products in the fields of Animal Science, Export Agriculture, Computer Science, Management, Science & Technology and other related fields.

Further the 3rd symposium was held on November 22-23, 2012 under the theme of “Meeting Global Challenges through Knowledge and Wisdom”. That year, students from three more degree programs, Tea Technology and Value Addition, Mineral Resources Technology and Industrial Information Technology were privileged to join with their research findings. A new feature, a poster session was added to benefit those who

were not successful in presenting their papers orally. In total, 47 posters were on display.

The 4th research symposium which was held on December 12 & 13, 2013 gave an immense opportunity to researchers to debate and exchange interactive views on their novel research findings. It provided the scholars an ideal platform to exhibit their new innovative knowledge in research activities by selecting the apt theme “Value

Addition towards Economic Growth and Prosperity’. Their scholarly knowledge was expected to be contributed to elevate the social wellbeing and socio economic development of the country.

The 5th research symposium was held on January 29 & 30, 2015 providing an appropriate and timely platform to bring together the young and promising researchers to present their work, interact with and learn from each

other on innovative theoretical and evidence-based research on the theme of “Value Addition for Sustainable Development”.

In the symposium, a number of parallel technical sessions were organized covering all eleven (11) degree programs and a poster session and more than 200 presenters presented their research findings in these sessions.

Uva Wellassa University, which primarily focuses on value addition in all its research and teaching activities, organized its 6th Research Symposium to provide a platform to discuss, debate, agreed upon and disseminate the current research on value addition under the theme of “Towards Emerging Trends in Value Addition”. Innovative perspectives towards value addition play a pivotal role in uplifting the social well-being, while improving the proficiency to capture the emerging opportunities in the globe. This symposium was held on January 28 & 29, 2016.

The 6th Research Symposium is undoubtedly reached its zenith of adding value to diversified areas of research such as Agriculture, Management, Science and Humanities paving way for a multitude of research on myriad disciplines under the areas stated above. The researches, academicians, professional, practitioners and undergraduates were enthusiastic in contributing to this year’s Symposium which received around three hundred and fifty (350) research papers

out of which two hundred and fifteen (215) research papers were selected and presented under 15 themes. The chancellor of the University resided as the Chief Guest of the Symposium whilst Professor Kapila Gunasekara, the former Vice Chancellor of the University of Peradeniya graced the occasion as the Guest of Honour. Professor U. K. J. Mudalige delivered the keynote speech while Dr. G. Chandrasena, Vice Chancellor, Uva Wellassa University took the lead as the Chairperson of the Symposium.

The seventh research symposium of the Uva Wellassa University (UWU) was held on January 19 & 20, 2017 at the university premises with the theme of “Global Trends towards Technopreneurial Development”. This was the first International Research Symposium which is named as IRSUWU 2017 organized by UWU, as the youngest university in Sri Lanka. IRSUWU 2017 comprised of

seven sub-themes namely Agriculture, Biology, Computer Science, Food Science, Process Engineering, Management Science and Earth Sciences.

Development that meets the entrepreneurship in a technology intensive context while processing of merging technology prowess and entrepreneurial talents and skills defines technopreneurial development. The ability of present to uphold this core value of technopreneurial development has so far not shown to be at a recognizable level. Research focused on value addition is therefore imperative in generating new knowledge, products, services and processes which are vital to devise new strategies to steer current resource base in order to protect, promote and to achieve key ideas of technopreneurial development. Having realized this fundamental concept in facing societal challenges in the 21st century, Uva Wellassa University organized its 1st International Research Symposium on the theme “Global Trends towards Technopreneurial Development” Corresponding with the IRSUWU 2017.

With the expectation of contributing to the country’s sustainable development, UWU opened its 2nd International Research Symposium under the theme of “Emerging Technologies for an Innovative Green Economy”, which was held during February 1-3, 2018 at UWU premises, encouraging researchers to discuss, share and disseminate research findings in this esteemed forum of intellectualities actively engaged in keeping footprints in the journey of Sri Lanka’s sustainable development and regaining economic prosperity.

Sri Lanka – Pearl of the Indian Ocean

Sri Lanka is known to many as the Pearl of the Indian Ocean and is a true paradise on earth. With beautiful golden beaches, splendid terrains and jungles, as well as cultural and historical sites, this picturesque island provides an abundant source of attractions and places to visit.

Sri Lanka is a diverse country home to many religions, ethnicities and languages. The Sinhalese people are the majority although there are many ethnic minorities including Tamils, Muslim moors, Burghers, Kaffirs, Malays and the aboriginal Veddha people.

Sri Lanka is an important producer of tea, coffee,

gemstones, coconuts, rubber and the native cinnamon. Sri Lanka has been called "The tear drop of Indian ocean" because of its shape and location and is known as "The pearl of the Indian Ocean" because of its natural beauty. The island contains tropical forests, and diverse landscape with high biodiversity. The country

has had a long history of international engagement, being a founding member of SAARC and a member of United Nations, Commonwealth of Nations, G7 and Non- Aligned Movement. In antiquity, Sri Lanka was known to travellers by a variety of names, such as, Lanka, Sinhala, Taprobane, Serandib, Ceilao, and Ceylon.

Lying within the

Indomalaya ecozone, Sri Lanka is one of 25 biodiversity hotspots in the world. Although the country is relatively small in size, it has the highest biodiversity density in Asia. Remarkably high proportion of the species among its flora and fauna, 27% of the 3,210 flowering plants and 22% of the mammals, are endemic. Sri Lanka has declared 24 wildlife reserves, which are home to a wide

range of native species such as Asian elephants, leopards, sloth bears, the unique small Lories, a variety of deer, the purple-faced langur, the endangered wild boar, porcupines and anteaters. Among the trees of the dry-land forests are valuable species such as satinwood, ebony, ironwood, mahogany and teak. These are the famous National Parks in Sri Lanka - Yala, Wilpaththu, Sinharaja, Udawalawa and Kumana Bird Sanctuary. Sri Lanka's biggest attraction is its tourism potential. It is a floating gem in the Indian Ocean, as its landscape ranges from arid plains to rainforests, and sandy beaches. It has a coastline of more than 1,300 kilometres with a tropical monsoon climate. A pleasant blend of geography and climate, as well as oodles of elephants, the biggest concentration of leopards and other wildlife, make Sri Lanka irresistible for tourism and investment.

Uva Wellassa University is the first Entrepreneurial University, providing education to the students focusing on employers' needs and entrepreneurship. The new course driven structure of education facilitates interdisciplinary, generates the knowledge base for education and practically enlightens their path. Value addition to national resource base caters for sustainable development of the nation.

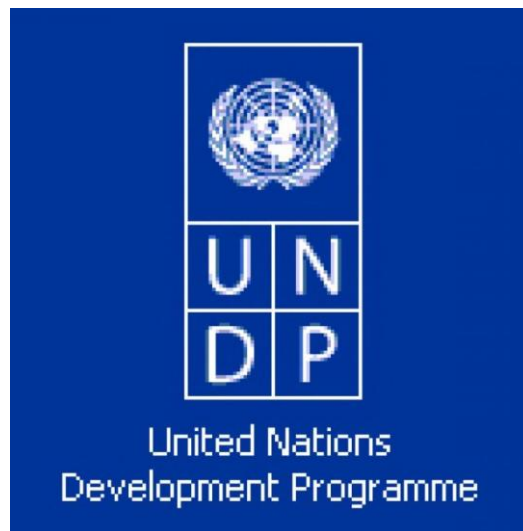

Our theme provides the necessary emphasis that should pervade the system within to pursue a vision clearly giving us a direction on Value Addition to the National Resource Base. It is also the only Entrepreneurial University in Sri Lanka. As such all our degree programs deliver knowledge and skills required by the employers in industry and commerce for value addition.

The university has a strong concept based on the theme; value addition to the local resource base and supported by a young team of qualified lecturers ready to take off. Uva Wellassa University has four faculties which are offering thirteen market oriented degree programs directly designed to fit the theme of the university and job market. The programs cover resource areas of Aquatic, Animal Science, Export, Tea, Palm, Latex, Minerals, Tourism, Hospitality & Events Management, IT, Entrepreneurship, Management, Science and Technology, Bio systems and Engineering technology.

The net result of this strategic theme effectively produces graduates readily employable both in the state and private sector.
